

Enemuoh Everistus

Fullstack Developer with 5+ years of experience delivering web and mobile applications using JavaScript, Node.js, Express, React, React Native, and MongoDB. Strong experience building REST APIs, backend systems, and production-facing user interfaces used in real applications. Practical hands-on experience with AWS (EC2, S3), Docker, and GitHub Actions at a basic level for deployment and CI/CD workflows. Comfortable in agile teams, handling production issues and reviewing code quality..

PROFESSIONAL EXPERIENCE

Digital Solutions, UK — Full Stack Developer

July 2024 - Mar 2026

- Developed and maintained RESTful APIs using Node.js and Express, enabling stable handling of concurrent user requests and improving overall system reliability under load.
- Implemented JWT-based authentication and authorization, strengthening application security and protecting sensitive endpoints.
- Introduced validation and sanitization layers, improving data integrity and mitigating common web vulnerabilities.
- Structured backend to support future microservice migration, improving system scalability and long-term maintainability.
- Optimized frontend performance using code splitting and lazy loading, reducing initial page load time by approximately 30–45% across core application pages.

360 Hubs, AU — Full Stack Developer

August 2023 - Nov 2024

- Strengthened application security by implementing validation and secure API access patterns, reducing exposure to common security vulnerabilities.
- Contributed to unit and integration testing efforts, improving stability of critical application features before deployment.
- Resolved production issues and implemented long-term fixes, improving system reliability across key application flows.
- Assisted in frontend integration, ensuring consistent API consumption and UI behavior.

TECHNICAL SKILLS

Languages: JavaScript (ES6+),
Typescript, HTML5, CSS3

Frontend: React.js, Tailwind
CSS, Component-based
Architecture, Context API
(State Management),
Responsive UI Development,
Performance Optimization

Backend: Node.js, Express.js,
REST API Design &
Development, JWT
Authentication, API Security,
Error Handling & Logging

Database: MongoDB
(Mongoose)

Cloud / DevOps: AWS (basic
EC2 deployment, S3 hosting),
Docker (basic
containerization), GitHub
Actions (basic CI/CD
workflows)

Tools: Git, GitHub, Postman

PROJECTS

**Full Stack E-commerce
Platform**

Mano Foods, NG — Fullstack Developer

April 2021 - Apr 2023

- Improved backend reliability by implementing structured error handling patterns across APIs and services.
- Developed reusable React components, reducing frontend development time by 25%.
- Ensured production readiness by validating environment configurations and API integrations across development stages.
- Contributed to system design decisions including API structure and data modeling, improving maintainability and scalability.

Kings Estate, AU — Node.js Developer

Aug 2019 - Sept 2021

- Optimized MongoDB queries and schema design, improving API response performance and reducing data retrieval delays.
- Implemented centralized error handling and logging, reducing debugging time and improving issue resolution in production.
- Collaborated across frontend and backend teams, improving feature delivery consistency and reducing integration issues.
- Secured sensitive data using environment variables and encryption practices, improving overall application security.

Code Campus, NG — Node.js Developer

Feb 2019 - Nov 2019

- Implemented rate limiting and access control, improving system reliability under load and preventing abuse.
- Worked in agile environments, contributing to iterative feature delivery and improved team collaboration.
- Mentored junior developers and conducted code reviews, improving code quality and team productivity.

Built a MERN e-commerce system to help small businesses manage products, orders, and payments in one place, replacing manual tracking and disconnected workflows.

Deployed using AWS (EC2, S3), Docker, and GitHub Actions for CI/CD.

Developed an admin dashboard for product and inventory management.

Built REST APIs for users, products, and orders, and integrated Stripe for secure payments.

Designed responsive frontend interfaces for better user experience across devices.

Food Delivery (MERN)

Implemented JWT authentication for secure user and admin access.

Designed full order workflow (cart to checkout to tracking) and built responsive React interfaces for better usability across devices.

Optimized database schema and queries, reducing response delays and improving application performance

Education

Bachelor of Engineering (B.Eng) — Electrical Engineering
